

Type: ST-75 Cabled Float Switch (Red Float)

A completely sealed, waterproof system ideal for sewage, waste water tank, and liquid level control.

RADAR Cabled Float Switch uses UL certificated waterproof cable and reed switch. Its internal controlling unit is sealed completely inside float, thus it's tight and waterproofed.

A unique float retainer (sink) is attached, it's easy to install, user may adjust cable's length (between float and sinker) freely to control liquid level.

Because the controlling unit is sealed inside float, this switch functions as liquid level rise and fall, and will not be interpreted by outside litters.

This float uses triple core cable, and its A, B terminals are used for water supply and drainage.

SPECIFICATIONS:

1. AC 110/220V, 1/2 HP
2. Cable length 5M- Waterproofed

TERMINAL IDENTITY:

Blue and yellow are for draining,
Brown and yellow are for supplying.

REFERENCE:

The ideal length between retainer (sinker) and float is 20cm or above.
